are used in the methods for monitoring differential expression of genes
in a first filamentous fungal (FF) cell relative to expression of the
same genes in one or more second filamentous fungal cells. Monitoring
the global expression of genes from FP cells allows the production
challed expression of genes from FP cells allows the production
constitution of the microorganisms to be improved. New genes may be
discovered, possible functions of unknown open reading frames can be
classible functions of unknown open reading frames can be
dentified and gene copy number variation and stability can be
considered. The expression of genes can be used to study how FF cells
considered. The expression of genes can be used to study how FF cells
considered. The expression of genes can be used to study how FF cells
considered. The expression of genes conditions, environmental stress, spore
control of the continuous provides several advantages over genomic or
control of the gene or open reading frame, and organisation of the
control of the gene products to facilitate
control of the results. APRI1248 to AAFI1247 represents ESTS from Aspergillus
control of the control of the gene products of the formation of the control of the gene products of the formation of the control of the gene products of the formation of the gene formation of the gene products of the formation of the gene products of the formation of the gene formation of the gen
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Human, immune, haematopoietic; immune/haematopoietic antigen; cancer; cytostatic; gene therapy; vaccine; metastasis; ds.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               à
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                 The invention relates to an isolated nucleic acid molecule (I) comprising a nucleotide sequence given in Tables 1-9 (ABV00010-ABV62213) of the specification or its complement. (I) is useful for:

(a) assessing whether a patient is afflicted with prostate cancer;

(b) monitoring the progression of prostate cancer in a patient;

cancer in a patient,

cancer in a patient,

(d) assessing the efficacy of a therapy for inhibiting prostate cancer

    (e) selecting a composition for inhibiting prostate cancer in a patient;
    (f) assessing the prostate cell carcifiogenic potential of a compound;
    (g) determining whether prostate cancer has metastasized in a patient;
    (h) assessing the aggressiveness or indolence of prostate cancer in a

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention describes a method for monitoring differential expression of genes in a first filamentous fungal (FF) cell relative to expression of the same genes in one or more second filamentous fungal cells. The method uses General-labeled nucleic acids isolated from the FF cells and a substrate of expressed sequence tags (EST). The ESTS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Monitoring differential expression of genes in filamentous fungal cells uses fluorescence-labeled nucleic acids isolated from the cells and a substrate of expressed sequence tags -

(HUMA-) HUMAN GENOME SCI INC

Rosen CA, Barash SC, Ruben SM

WPI; 2001-483426/52.

Nucleic acids encoding human immune/hematopoietic antigen polypeptides, useful for preventing, diagnosing and/or treating cancers and metastasis -

Disclosure; SEQ ID NO 33178; 3071pp + Sequence Listing, English.

AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I)
amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic
activity, and can be used in gene therapy and vaccine production. (I)
proteins and polynucleotides may be used in the prevention, diagnosis and
treatment of diseases associated with inappropriate (I) expression. For
example, they may be used to treat disorders associated with decreased
expression by rectifying mutations or deletions in a patient's genome
that affect the activity of (I) by expressing inactive proteins or to
supplement the patients own production of (I). Additionally, (I)
colpuncleotides may be used to produce the secreted (I), by inserting
the nucleic acids into a host cell and culturing the cell to express the
protein. (I) proteins and polynucleotides may be used to prevent,
diagnose and treat immune/haematopoietic-related diseases, especially
cancers and cancer metastesses of haematopoietic-derived cells. AKK4703
to AAK87694 represent human immune/haematopoietic antigen genomic
sequences from the present invention. AAK54942 to AAK54950 and AAM82169
represent sequences used in the exemplification of the present invention.

The invention relates to novel genes (AAL34669-AAL37666) and proteins (ABB3087-ABB04199) associated with the musculoskeletal system useful for preventing, treating or ameliocating medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and (anti-sgonists are useful in the disgnosis, treatment cancer of the adrenal gland, bone, bone marrow, breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune tract, liver, lung, or urogenital; (b) immune thyroidfils, diabetes mellitus, crohn's disease, multiple sclerosis, rheumatoid arthritis and ulcerative colitis; (c) cardiovascular disorders such as myocardial ischaemias; (d) wound healing; (e) neurological diseases e.g. cerebral anoxia and epilepsy; and (f) infectious diseases such as viral, bacterial, fungal and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           parasitic infections.
Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Isolated polypeptide for treating, preventing and/ or prognosing disorders related to the musculoskeletal system including musculoskeletal cancers and also for testing and detection e.g.

Claim 102; Page 484-508; 1449pp; English

```
The present invention relates to a recombinant DNA construct of a plant (Arabidopsis thaliana) centromere. The constructs are useful for producing stably inherited michrosomes which can serve as vectors for the construction of transgenic plant and animal cells expressing selected proteins such as hormones, enzymes, interleukins, clotting factors, cytokines, antibodies, and growth factors.
                                                                                                                                                                                                                      Gapa

                                                                                                                                                                                                                                                                                                                                     ô
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention is useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL16176-ABL30511),
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signalling and cell-cell
                                                                                                                              New nucleic acid fragment, primers and probes - useful for detection of non-A-B-C-D-E type hepatitis virus
                                                                                                                                                                                                                                                                                                                                     Gaps
                                                                                                                                                                                                   A primer for the detection of non-A-B-C-D-E-F type hepatitis virus or hepatitis G virus (HGV), comprises a HGV nucleic acid fragment, e.g. the present sequence. The primers may be used for the detection of HGV via PCR.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Drosophila, developmental biology, cell signalling, insecticide;

This sequence was finished as follows unless otherwise noted: all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by restriction digest.

This clone was mapped by Grieff, M., Whyte, M. P., Thakker, R. V., and Mazzarella, R. Sequence analysis of 139 kb in Xp22.1 containing spermine synthase and the 5' region of PEX. Genomics MAPPING INFORMATION:

SOURCE INFORMATION: (1997). 44:227-231

This clone is from a chromosome X-specific cosmid library LLOXNCC01 'U'. The source of the chromosomes was a human/hamster hybrid, GM07297-F, from Robert Nusabbaum at the University of Pennsylvania School of Medicine. Please contact the Lawrence Livermore National Laboratory at http://www-bio.llnl.gov/genome to obtain the clone. VECTOR: Lawrist16

It currently consists of 2 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gap between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will

requests: clonerequest@sanger.ac.uk

On May 11, 2001 this sequence version replaced gi:1374045.

During sequence assembly data is compared from overlapping clones.

Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.

This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one Mil subclone; and the assembly was confirmed by resolve all sequencing and the assembly was confirmed by resolve all sequencing mumbers given in the feature table with their source databases: Em; EMBL; Sw:, SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information on the WORMPEP database can be found at http://www.sanger.ac.uk/kProjects/C_elegans/wormpep This sequence was generated from part of bacterial clone contigs of human chromosome 6, constructed by the Sanger Centre Chromosome 6 Mapping Group. Purwer of information can be found at http://www.sanger.ac.uk/HGP/Chr6

RPII-80A23 is from the library RPCI-11:1 constructed by the group of Pieter de Jong. For further details see
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             http://www.chori.org/bacpac/home.htm

NECTOR: pBACe3.6

IMPORTANT: This sequence is not the entire insert of clone

RP11-80A23 It may be shorter because we sequence overlapping

sections only once, except for a 100 base overlap.

The true left end of clone RP11-295F4 is at 44843 in this sequence.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             NOTE: This is a 'working draft' sequence. It currently consists of 6 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

It currently consists of 27 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

/note="Organ: heart; Vector: Lambda ZAP II, pKSII-;
Site_1: Not1; Site_2: Not1; Human heart cDNA library was
constructed in Lambda ZAP II vectors using Not1 linkers.
Clones from the primary cDNA library were deposited into
95 well trays for storage and retrieval. The 'Isolation of
chromosome-specific genes by reciprocal probing of arraed
cDNA and cosmid libraries' (Human Molecular Genetics, 1995
, Vol. 4, No 8; ppl373-1380) provided cDNA-Clones as
plasmids (vector pKSII-, E. coli)."

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Single path sequence (manual checked and edited) with a vector primer of clone xh8Hll. Sequence starts with base 1 following the determined vector sequence (ACGCGGTGGGGGCGCT, small letters: NotIsite). ESTS 305-10R-8Hll-2, 3055-10U-8Hll-2 (with vector primers) and 8Hll-Rl-C8-0Z, 8Hll-U1-C7-0Z (with gene specific primers) provide a contig of the whole insert of clone xh8Hll. Finest Length: 850 Std Error: 10.00 Plate: 8 row: H column: 11 Seq primer: 3055-10R (like Ml3 reverse)

/note="Organ: eye; Vector: 19773-Pac (Pharmacia) with a modified polylinker; Site_1: EcoR I, Site_2: Not I; U.E-DXO is a coNA library containing the following tissue(s): fetal eyes. The library was constructed according to Bonaldo, Lennon and Soares, Genome Research, 6:791-806, 1996. First strand cDNA synthesis was primed with an oligo-dT primer containing a Not I site. Double stranded cDNA was ligated to an EcoR I adaptor, digested with Not I, and cloned directionally into pT773-Pac vector. The oligonucleotide used to prime the synthesis of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             BF791178 12-JAN-2001 156 bp mRNA linear EST 12-JAN-2001 602251278F1 NIH MGC_81 Homo sapiens cDNA clone IMAGE:4338594 5',

// Note="Organ: eye; Vector: pT713-Fac (Pharmacia) with a modified polylinker; Site=1: EccR I; Site=2: Not I;
UI-E-DXO is a CDNA library containing the following tisque(s): fetal eyes: The library was constructed according to Bonaldo, Lennon and Soares, Genome Research, 6:791-806, 1996. First strand cDNA synthesis was primed with an oligo-dT primer containing a Not I site. Double stranded CDNA was ligated to an EccR I adaptor, digested with Not I, and cloned directionally into pT713-Pac vector. The oligonucleotide used to prime the synthesis of first-strand cDNA contains a library tag sequence that is located between the Not I site and the (dT)18 tall. The sequence tag for this library is AGAATCAAGA. This library was created for the program, Gene Discovery in the Visual System, supported by National Eye Institute (NEI). "

/note="Vector: Lambda gt22; Site 1: NotI; Site 2: SalI;
mRNA was purified from human fetal hearts (10-12 weeks).
cDNA was constructed using a NotI-Oligo dT adaptors-primer.
SalI adaptors were ligated, followed by digestion with NotI, for direction cloning into predigested lambda gt22.
Method is described in J. Mol. Cell. Cardiol. (1994) 26, 1329-1333) "
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    /organism="Homo sapiens"

UI-B-DX0 is a cDNA library containing the following tissue(s): fetal eyes. The library was constructed according to Bonaldo, Lennon and Soares, Genome Research, 6:791-806, 1996. First strand cDNA synthesis was primed with an oligo-dT primer containing a Not I site. Double strandc cDNA was ligated to an EcoR I adaptor, digested with Not I, and cloned directionally into pT7T3-pac vector. The oligonucleotide used to prime the synthesis of first-strand cDNA contains a library tag sequence that is located between the Not I site and the (dT)18 tail. The sequence tag for this library is AGAATCAAGA. This library was created for the program, Gene Discovery in the Visual System, supported by National Bye Institute (NEI): "

Sequence 1, Application US/09816703A;
Patent No. 6455026
GENERAL INFORMATION:
APPLICANT: Meller, Thorsten
APPLICANT: Meller, Sabine
APPLICANT: Meller, Sabine
APPLICANT: Chin,Daniel
TITLE OF INVENTION: Treatment and Visualization of Brain Tumors
TITLE OF INVENTION: Treatment and Visualization of Brain Tumors
TITLE OF INVENTION UNMBER: US/09/816,703A
CURRENT APPLICATION NUMBER: US/09/816,703A
CURRENT FILING DATE: 2001-03-23
NUMBER OF SEQ ID NOS: 2
SOFTWARE: Patentin version 3.0
SEQ ID NO 1
LENGTH: 7941
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
